SYNTHETIC INVESTIGATION / TRAINING MATERIAL

Operation Glasshouse

Evidence-backed incident reconstruction

Case reference	SP-8EEC8DBC
Case created	2026-10-22 17:19:49 UTC
Case status	open
Exported	Not exported / live preview

01 Executive context

A synthetic document-to-script investigation. All identities, activity and endpoints are fictional.

14	1	4
Normalized events	Original artifacts	Investigative leads

> Rule matches are investigative leads. They do not independently establish malicious activity or intent.

02 Evidence inventory & integrity

glasshouse.jsonl

4,640 bytes / ready

Evidence ID	894c3778-1437-4979-8b50-5bd3c9381059
Parser	spectre-structured/1.0.0
Source	SPECTRE synthetic dataset v1
SHA-256	cfbfbc8027948eb14fe8463eed0c31a7e42518f455201b419ad9d3ba3344ae37

03 Investigative findings

F01 SP-004 / MEDIUM UNREVIEWED

Possible Run-key persistence

A registry value-set record targets a Windows CurrentVersion Run or RunOnce key.

Limitations. Legitimate software uses these keys. The value data must be reviewed before concluding persistence is malicious.

EVT-06DD0270

F02 SP-001 / HIGH UNREVIEWED

Encoded PowerShell execution

A process creation record contains a PowerShell executable and an encoded-command argument.

Limitations. Encoded commands are also used by legitimate administration. Payload content is not decoded or executed.

EVT-949F23E3

F03 SP-002 / HIGH UNREVIEWED

Office application spawned a script interpreter

An explicit parent ProcessGuid links an Office process creation to a script interpreter creation.

Limitations. An Office child process is an investigative lead. This does not establish a malicious document or user intent.

EVT-9EEB332A EVT-949F23E3

F04 SP-003 / MEDIUM UNREVIEWED

Script execution followed by network activity

An encoded PowerShell creation is followed within five minutes by a network record with the same host and ProcessGuid.

Limitations. A shared process identity supports the relationship. Destination reputation and transferred content are unknown.

EVT-949F23E3 EVT-20E202E0

04 Analyst observations

No analyst observations stored.

05 Scope & limitations

Analysis covers the supported ingested records. Original timestamps are retained and normalized UTC values are stored separately. Missing events and ancestry are not inferred as facts. Application custody history is not tamper-proof storage.

Structured JSON, JSONL and CSV ingestion. Binary EVTX is not supported. PDF exports summarize the first 100 timeline events; structured JSON includes every stored event and custody record.
